

### **Discription:**

The SBI Multi-Mounted Modular IFAK system is designed to be carried by an operator in a configuration that fits mission requirements or personal preference. The IFAK can be mounted to a belt, molle kit, or used in a drop-leg position. The trauma panel separates the bleeding kit from the airway kit, allowing for gross motor responses. The patent-pending “MK 1 Rip System” ensures the fastest access to the life-saving contents within, even when the operator's hands are wet from sweat or blood.

Designed & made in America with heavy-duty nylon laminate (Squadron) and 500D Cordura, the system allows rapid deployment of medical supplies. Developed with direct input from active-duty operators and medical personnel, the SBI Multi-Mounted Modular IFAK enhances response times to render necessary aid. SBI can custom fill contents to match specific requirements, which can be vacuum sealed or staged in reclosable 6 mil bags.

### **Key features include:**

- Squadron Laminate & Cordura nylon construction
- Adjustable retention
- Elastic loops for markers, chem lights, etc.
- Rapid Release Panel with Flex Pockets
- Drop Leg Configuration: Side release buckles on thigh strap and belt strap for rapid on/off
- Kit Mount Configuration: Molle Compatible Back Panel
- Belt Mount Configuration: Rigger belt dual slot for secure mounting
- Made in USA
- Berry Compliant
